

## Restructure Your DM Libraries

**dmMerger** for Interwoven consolidates, moves or archives profiles and documents between Interwoven libraries. dmMerger can consolidate multiple libraries into a single library (e.g., for centralization efforts) and split libraries (e.g., for document and workspace archiving or performance scalability).

### Minimize End User Downtime

dmMerger minimizes the system downtime associated with document migration and database consolidation efforts. dmMerger migrates the SQL profile data separately from the document files, allowing users back online once the profile data has migrated. This significantly reduces the downtime, enabling Baker Robbins to migrate any Interwoven Library within an eight-hour outage window.

### Centralize and Consolidate in a Single Step

**dmMerger** allows Baker Robbins consultants to move data from a geographically distributed model into a centralized, consolidated library in one transaction. Because documents are handled separately, **dmMerger** can easily accommodate transfers across the WAN.

### Metadata Transformations

**dmMerger** dynamically updates metadata during the migration. Customized metadata transformations can be developed to support business objectives, such as:

- Simplify an outdated and ineffective document type list
- Align metadata when two firms merge
- Re-organize metadata to support Matter Centric design objectives.

### Many System Benefits

- Migrates document history, document worklists, matter centric workspaces and folders
- Workspace, folder and document archiving by date or other document or workspace metadata based criteria
- Simple, proven, effective tool for consolidating Interwoven data in conjunction with Firm Mergers and Spin-offs

### Align the Tool to the Business Needs

- **dmMerger** provides a mechanism for defining customized migration rules to meet the needs of the organization
- Streamlines document types in advance of a Matter Centric Rollout
- Accommodates metadata re-organization efforts associated with Firm mergers and acquisitions.

### Proven Methodology

**dmMerger** is built on the Shamrock platform. Shamrock is a proven and effective tool for populating an Interwoven WorkSite library. The tool has imported tens of millions of documents based on our best practices for large scale document migrations.

### Learn More

Baker Robbins has been a strategic Interwoven partner for over twelve years. Our Team has deployed more seats of WorkSite than any other reseller or consulting partner. Our prestigious legal client base continues to rely on us for thought leadership and the innovative application of well-designed technology.
