

A Launching Pad for Web Content within Outlook

Extender is an Outlook add-in that extracts client-matter values from an iManage workspace and displays a web page in an Outlook window. **Extender** can deliver a matter-based portal within Outlook.

Currently, FileSite users clicking on the root of an iManage Workspace experience white space in the right-hand pane. **Extender** converts this white space to usable space where you can display anything from an intranet page, a matter-centric portal or administrative pages to assist with common tasks relevant to matter administration. It acts as a **launching pad** for any web application from within Outlook. **Extender** is delivered with four default modules.

Optional Folders

The Optional Folders module was developed to overcome the inherent tension between organizational control over workspace layout and the case team's need to modify the structure of the workspace as the matter evolves.

From Optional Folders, users can dynamically add one or more pre-determined folders to the workspace. By providing a consistent and relevant number of "optional folders" through Extender, users are empowered to grow their workspaces based on the needs of the case.

Projects Module

The Projects Module enables users to add entire folder families to the workspace, thereby promoting a consistent design. With the projects module, sub-matters can be created by the legal teams without help desk support.

Invitations Module

The Invitations Module provides self-service security. Workspaces can be created as private to the partner responsible for the matter, and then others are assigned or invited. Through invitation, users are added at appropriate security levels by members of the matter team, without help desk intervention or elevated rights.

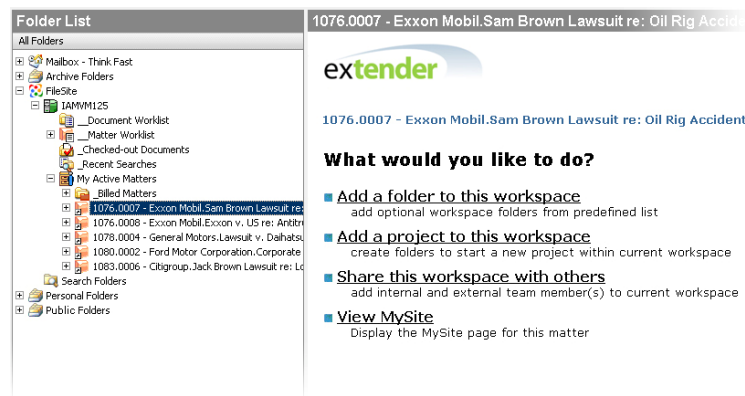

Extender Benefits

- Bring data to users where they want to work: Outlook
- Workspace design does not have to be perfect when you deploy. Let your users adapt workspaces from a controlled menu
- As new modules are available, licensed sites can download the modules from insight.brco.com
- **Extender** is developed using web 2.0 technology, the Outlook eventing interface, and Outlook's native ability to render a web page without leaving the familiar application

Learn More

Baker Robbins & Company is a strategic Interwoven platinum partner. Our Team has deployed more seats of WorkSite than any other reseller or consulting partner.

Our prestigious legal client base continues to rely on us for thought leadership and the innovative application of well-designed technology.
